

# [Rear Sling Fitting for a Rifle]

## Abstract

The invention is a new rear sling fitting for a rifle. The new sling fitting features two different types of mounting apertures for different types of slings. In the preferred embodiment, two pairs of two different types of apertures are provided. The fitting's central mounting aperture, for mounting the fitting between the stock and receiver of a rifle, is modified dependant upon the type of buffer tube or mounting apparatus is provided for the rifle's stock.
